

UCHINDAMI MKANDAWIRE

*Electronics & Computer Engineering
Student | IT Intern*

ABOUT ME

Final-year Electronics and Computer Engineering student with practical interests in IT support, embedded systems, networking, databases, and web development. Currently gaining industry experience as an IT Intern at EGENCO while developing GRIFFIN, a remote fuel-monitoring system for telecom tower sites.

CORE SKILLS & TOOLS

- **IT Support**
Technical troubleshooting, user support, ICT operations
- **Embedded Systems**
ESP32, Arduino, sensors, data acquisition
- **Programming**
C++, Python, JavaScript, MATLAB
- **Web & Data**
HTML, CSS, FastAPI, PostgreSQL, REST APIs
- **Networking & Tools**
Cisco Packet Tracer, Git, GitHub

TECHNICAL INTERESTS

- Embedded and IoT systems
- Computer networks
- Database-backed applications

EXPERIENCE

IT Intern | **EGENCO** | *Current*

Providing IT Support, Printer and Network troubleshooting

EDUCATION

Bachelor of Electronics and Computer Engineering

Malawi University of Business and Applied Sciences (MUBAS) — Currently pursuing

Malawi School Certificate of Education (MSCE)

Marymount Girls Secondary School — Completed

Bachelor of Electronics and Computer Engineering

Snow white primary school — Completed

FEATURED APPLICATIONS & PRODUCTS

GRIFFIN — *Embedded Systems and IoT*

Impact: smarter fuelling logistics

A remote fuel-monitoring and anomaly-detection system for telecom generator tanks. Built on an ESP32 with ultrasonic and flow sensors streaming to a FastAPI/TimescaleDB backend, it uses machine learning to classify five fuel events — theft, leakage, delivery, normal and heavy consumption — designed for unreliable connectivity and constrained field deployments.

Smart Irrigation House — *Automation*

Impact: reduced time wastage

An automated irrigation prototype that uses sensor readings to control water delivery and demonstrate practical resource-efficient automation.

Enterprise Network Design — *Computer Networks*

Impact: higher QoS

A simulated organizational network developed in Cisco Packet Tracer to apply structured addressing, segmentation, routing, and connectivity testing.
